DEEPAK BOURAI

Noida, India | +91 9015910374 | deepakbourai@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Data Scientist with 1+ year of experience building end-to-end ETL pipelines, automating data workflows, and delivering BI solutions on live production data. Proficient in Python (Pandas, PySpark), SQL, Azure Data Factory, Databricks, and Power BI for data ingestion, transformation, and reporting. Skilled in developing scalable data models and dashboards to support business decision-making across inventory, invoicing, and operational domains. Applies machine learning techniques — including forecasting and computer vision — to complement analytics workflows. Microsoft Certified (AI-900, PL-300).

TECHNICAL SKILLS

- Power BI Desktop
- Azure Data Factory
- Databricks
- Microsoft Fabric*
- Power Query
- DAX
- Power Automate
- MySQL / SQL
- OpenAI API
- Azure Blob Storage
- Python
- PySpark / Pandas
- Scikit-learn
- NumPy
- Computer Vision
- Data Modelling
- Data Visualization
- ETL Pipelines
- Dashboard Development
- Data Integration

** Microsoft Fabric — foundational knowledge*

WORK EXPERIENCE

Data Scientist

Jun 2025 – Present

VoiceBack Analytics Pvt. Ltd. | Remote

- Developed and maintained scalable ETL pipelines using Azure Data Factory and Databricks to automate ingestion, transformation, and validation of large-scale live production datasets, reducing manual data handling effort by ~40%.
- Processed and transformed inventory and invoice datasets using Python (Pandas, PySpark) — standardizing SKU-level records, resolving data discrepancies, and preparing clean structured datasets for downstream analytics and reporting.
- Built and monitored data pipelines on live production environments, ensuring 99%+ data accuracy and performing reconciliation to catch mismatches before dashboard deployment.
- Developed interactive Power BI dashboards with advanced DAX measures (time intelligence, rolling averages, YTD/MTD, dynamic KPIs), improving operational reporting efficiency by 30% and reducing report turnaround time.
- Worked on Microsoft Fabric for basic data integration tasks including Lakehouse ingestion and pipeline configuration.
- Built computer vision models using Python and deep learning frameworks (YOLO, OpenCV) to analyze CCTV video streams for customer footfall estimation and demographic classification, achieving ~85% detection accuracy.
- Designed a Generative AI-based file classification system using OpenAI APIs and prompt engineering to automate document filtering across invoice and sourcing files, cutting manual review time by ~35%.
- Analyzed inventory and sourcing data to identify vendor cost trends, stock movement patterns, and replenishment signals — supporting a 15% improvement in procurement planning accuracy.
- Collaborated with operations, finance, and supply chain teams to gather requirements and translate business needs into actionable BI solutions.

Associate

Sep 2019 – Mar 2020

Conduent India LLP | Noida

- Executed complex SQL queries to optimize and maintain customer databases, improving data retrieval speed and reporting accuracy.
- Automated reporting workflows and reduced report generation time by 30% through improved data processing and analytics techniques.
- Mentored and trained new team members on internal data workflows and onboarding processes, boosting overall team productivity.

PROJECTS

Demand Forecasting & Price Optimization | Python + Power BI

- Built an end-to-end ML pipeline using Python (Scikit-learn, XGBoost, NumPy) to forecast FMCG demand and support pricing optimization strategies.
- Performed data preprocessing, feature engineering, and model evaluation (RMSE, R-squared) to validate prediction accuracy.
- Visualized forecasting results using Matplotlib and Power BI dashboards to support business decision-making.

Inventory & Sourcing Analytics Data Pipeline | Azure Data Factory + SQL

- Designed an end-to-end ETL pipeline using Azure Data Factory connecting SQL databases and Azure Blob Storage for automated data ingestion.
- Built structured datasets and analytical models to support vendor cost analysis and sourcing optimization.

Electric Vehicle Market Analysis | SQL + Power BI

- Conducted exploratory data analysis (EDA) on EV market datasets using SQL and Power BI to identify key trends and segmentation patterns.

• Applied unsupervised learning techniques and data visualization to identify actionable market insights.

EDUCATION

PG Diploma in Big Data Analytics & Machine Learning 2024 – 2025
CDAC

M.Tech in Artificial Intelligence & Machine Learning 2026 – 2028
BITS Pilani

Master of Computer Applications (MCA) 2021 – 2023
Glocal School of Science and Technology

Bachelor of Computer Applications (BCA) 2016 – 2019
Hierank Business School

ACHIEVEMENTS & CERTIFICATIONS

• Microsoft Certified: Azure AI Fundamentals (AI-900)
• Microsoft Certified: Power BI Data Analyst Associate (PL-300)
